

TECHNOLOGY AND DATASET SOURCES

Floor Brief

A reference for the latest website and macOS app builds:
what they run on, how they are packaged, and where every dataset comes from.

Item	Value
Product	Floor Brief (RAG Prediction Game Project)
Surfaces described	Website at http://127.0.0.1:8765 and FloorBrief.app (macOS)
API version	1.1.0 (FastAPI title Floor Brief)
Website JS / CSS	apps/web · last edited 19 Aug 2026 16:47 IST
macOS app bundle	dist/FloorBrief.app and Desktop/FloorBrief.app · built 19 Aug 2026 16:51 IST
Live database as-of	19 August 2026
Horizon	Planning calendar 2026–2030; GMV join 2022–2026
This document	19 August 2026

The website and the Mac app share one FastAPI application, one JavaScript desk, and the same live datasets. The Mac app is a native window around that website, not a second product.

1. What this version ships

Floor Brief is a merchandising desk. It answers what to promote today against a catalog of game products, a 2026–2030 event and entertainment calendar, live search-interest signals, and 2022–2026 order GMV. Retrieval uses a TF-IDF RAG index retrained whenever product and event datasets rebuild. Confirmed publisher and organizer dates override stale Wikipedia scrapes. Cover art comes from Wikipedia/Wikimedia with local SVG fallbacks so tiles are never blank.

Website and Mac app pages

Page	What it does
Product	Look up a catalog or announced title: promotions, trends, cover art, related events.
Event	Open a calendar window with confirmation status, mapped SKUs, and related media.
Cross-sell	Enter an event → games and attach products to merchandise in that runtime.
Calendar	Month/year range → overlapping events with promote and cross-sell lists.
Trends	Google Trends RSS topics ranked against merchandising priorities and art.
Traffic	Search signals plus country-wise product and event placement.
Dashboard	2022–2026 weekly GMV joined to franchise event runtimes, with year leaderboards.

Live snapshot on 19 Aug 2026: 1,139 events, 589 adaptations, 264 announced games, 2,223 promotion plans, 2,092 artwork records, 59,808 RAG documents (55,857 product + 1,139 event + 589 adaptation + 2,223 promotion). Daily audits recorded 1,002 changes on that rebuild.

2. Runtime architecture

One Python process serves HTML, CSS, JavaScript, artwork, and JSON APIs. The website binds 0.0.0.0:8765. The Mac app starts the same FastAPI app on a free localhost port, waits for /api/health, then opens a pywebview window at 1320×880.

Layer	Technology	Role in this build
Language	Python 3.12.10	API, datasets, RAG, desktop host, PyInstaller boot.
HTTP API	FastAPI 0.141.1	REST under /api/* plus static mounts for /static and /media/artwork.
ASGI server	Uvicorn 0.52.3	Website: python -m apps. Mac app: background thread in apps/desktop.py.
CORS	Starlette CORSMiddleware	Allow-all origins so the local desk and webview can call the API.
UI	HTML5 + CSS3 + vanilla JS	apps/web — no React/Vue. Tabs, search comboboxes, briefs, charts.
Charts	Chart.js 4.4.1 (jsDelivr CDN)	Trends, traffic, and GMV dashboard canvases.
Fonts	IBM Plex Sans + Syne	Loaded from Google Fonts; system sans-serif fallback.
i18n	apps/web/js/i18n.js	Full copy in English, German, Japanese, Brazilian Portuguese; market picker for 43 geos + WW.
Desktop shell	pywebview 6.2.1	Native macOS window (WKWebView) pointing at the local Uvicorn URL.
Packaging	PyInstaller 6.22.1	scripts/build_desktop.sh → dist/FloorBrief.app (bundle id com.ragprediction.floorbrief).

3. Data, retrieval, and analysis libraries

Library	Version	Used for
pandas	3.0.5	Catalog/calendar wrangling in notebooks and some rebuild paths.
scikit-learn	1.9.0	TfidfVectorizer (1–2 grams, 50k features) and cosine similarity retrieval.
joblib	1.5.3	Persist and load data/processed/rag/tfidf_index.joblib.
openpyxl	3.1.5	Excel exports under data/processed/sheets/ (source + entry_date columns).
odfpy / stdlib zip+XML	1.4.1	Read the ODS planning calendar; orders XLSX parsed via zip/XML.
python-dateutil	2.9.0	Date parsing around flexible Wikipedia and catalog stamps.
stdlib csv/json/xml	—	Catalog CSV, live JSON, Google Trends RSS, artwork metadata.

Supporting tools (not in the shipped UI)

- Jupyter / ipykernel — notebooks 01–05 for exploration, promotion, trends, cross-sell, calendar.
- pytest — tests for orders, calendar dedupe, promote, geo, coverage, audits, trend filtering.
- macOS launchd (scripts/install_daily_job.sh) — daily 08:15 refresh of datasets, audits, RAG, and trends.
- curl fallback in src/http.py when system Python lacks CA certificates.

4. How the website and Mac app differ

	Website	macOS FloorBrief.app
Start	python -m apps (host 0.0.0.0, port 8765)	Open FloorBrief.app, or python -m apps.desktop
Process	Long-running Uvicorn in the project venv	Bundled Python + Uvicorn on an ephemeral 127.0.0.1 port
UI	Browser at http://127.0.0.1:8765	pywebview window titled Floor Brief, min size 960×640
Code	Live files under apps/web and src/	Frozen copy inside Contents/Resources (sys._MEIPASS)
Data	data/processed on disk, refreshed in place	Datasets bundled at build time; in-app refresh still calls the same Python modules
Health check	GET /api/health	Desktop waits up to ~45s for /api/health before showing the window

This Mac build includes the 19 Aug 2026 click/search fix (restored dateConfidenceBadge in app.js). Linux and Windows packaging were removed from the project.

5. Dataset sources

Every product and event row carries source, entry_date (first seen), and last_checked. Excel/CSV exports under data/processed/sheets/ keep those columns. Rows from a pinned publisher or organizer source show a green “Verified date” badge in the UI.

5.1 First-party storefront and planning files

Dataset	File / origin	How Floor Brief uses it
Product catalog	data/raw/game_products.csv (gzip fallback). Original export: list_of_all_game_products_by_release_date (12 Aug 2026).	Storefront SKUs, platforms, types. Gift cards dropped. Corrupt dates before 1971 ignored. Live Wikipedia/Wikidata overlay announced titles.
Events & adaptations ODS	data/raw/events_and_adaptations.ods (fallback: RAGPredictionGameProjectDataset.ods on Desktop).	Seed industry calendar and IP adaptations. Source stamp: ods. Live Wikipedia/Wikidata/horizon rows overwrite or extend it.
Orders GMV 2022–2026	data/raw/orders_2022_to_2026.xlsx (or Downloads export dated 18 Aug 2026).	Weekly GMV strings joined to franchise event runtimes. Dashboard period/year product and event leaderboards. Windows longer than 45 days are skipped.

5.2 Open web APIs (no paid keys)

Source	Endpoint / pages	What is taken
English Wikipedia API	https://en.wikipedia.org/w/api.php (parse wikitext; search)	Year pages YYYY_in_video_games (2022–2030) for major events and game-based films. List_of_video_games_released_in_YYYY and year pages for announced titles 2026–2030.
Wikipedia REST summaries	https://en.wikipedia.org/api/rest_v1/page/su mmmary/{title}	Box art, posters, event logos. Search fallback when the storefront title ≠ article title.
Wikidata SPARQL	https://query.wikidata.org/sparql	Video games (P31/P279* Q7889) with publication date P577 by year. Adaptations: works with P144 based on a video game. Limit 500 rows/year.
Google Trends RSS	https://trends.google.com/trending/rss?geo={ US,GB,DE,JP,BR,AU}	Daily trending search titles, approx_traffic, related news headlines. Geos: United States, UK, Germany, Japan, Brazil, Australia.
Wikimedia Pageviews	https://wikimedia.org/api/rest_v1/metrics/pag eviews/per-article/en.wikipedia/...	Last ~10 days of English Wikipedia user pageviews for a merchandising watchlist (Spider-Man, GTA, Zelda, Minecraft, etc.). Spike vs median baseline.

User-Agent: RAGPredictionGameProject/1.0 (local merchandising research; Wikimedia + Google Trends RSS). Wikimedia content is used under the projects' published terms; this desk is an internal research tool.

5.3 Curated and generated layers

Layer	Module	Source of truth
Official date overrides	src/official_dates.py	Publisher/organizer pages beat Wikipedia and horizon templates. Re-applied on every store load.
Historical registry	src/historical_calendar.py	Confirmed 2022–2026 runtimes for cons, showcases, sports, films, OTT. Stamp: historical_registry / Wikipedia year pages and organizer calendars.
Horizon templates	src/horizon.py + src/coverage.py	Recurring 2026–2030 windows (CES, GDC, Gamescom, TGS, The Game Awards, sports seasons, esports). Live year-page dates overwrite these when confirmed.
Announced titles	src/announced.py	Hand-maintained tentpoles with Wikipedia URLs (GTA VI, Witcher 4, Wolverine, Fable, Silksong, ...) plus release-window events on the calendar.

Layer	Module	Source of truth
Cross-media extras	src/coverage.py	Example: Spider-Man: Brand New Day theatrical window from Sony Pictures (sonypictures.com).
Geo placement	src/geo_placement.py	43 markets + worldwide inferred from event location/scope, not a third-party geo API.
Calendar dedupe	src/calendar_dedupe.py	Merges “Gamescom” vs “Gamescom 2026”, overlapping entertainment titles, and near-duplicate windows. Distinct editions (e.g. Steam Next Fest Feb vs June) are kept.
Promotion plans	src/promote.py	Maps every dated event to catalog/announced SKUs by franchise overlap and runtime. Confirmation kind: confirmed / tentative / cancelled (src/dates.py).
Artwork cache	src/artwork.py → data/processed/live/artwork/	Wikimedia thumbs plus generated SVG placeholders. Web layer substitutes bundled SVG if a remote image fails.
RAG corpus	src/documents.py → data/processed/rag/	JSONL documents for events, adaptations, products, promotion plans. Retrained on daily --refresh.

6. Pinned official sources (verified-date badge)

These notes are stored on the row as `official_source` and win over scrapes. URLs below are the publishers' or organizers' public pages as recorded in `src/official_dates.py`.

Products

Title	Recorded source
Grand Theft Auto VI	Rockstar Games / Take-Two — rockstargames.com/VI
Marvel's Wolverine	Marvel.com / PlayStation Store / Insomniac
Resident Evil Requiem	Capcom press release
007 First Light	IO Interactive support / 007.com
Death Stranding 2: On the Beach	Kojima Productions / PlayStation
Mafia: The Old Country	2K Newsroom
Metroid Prime 4: Beyond	Nintendo
Hollow Knight: Silksong	Team Cherry
Ghost of Y▣tei	PlayStation Blog
Monster Hunter Wilds	Capcom
DOOM: The Dark Ages	Bethesda / id Software
Fable (2027)	Xbox / Playground Games
Crimson Desert	Pearl Abyss
Forza Horizon 6	Forza.net / Playground Games

Tentpole events (2026 editions unless noted)

Event	Recorded source
The Game Awards 2026	thegameawards.com — 10 Dec 2026
Gamescom 2026	gamescom.global / Koelnmesse — 26–30 Aug 2026
Gamescom Opening Night Live	gamescom.global — 25 Aug 2026
Tokyo Game Show 2026	tgs.cesa.or.jp — 17–21 Sep 2026
Summer Game Fest 2026	Wikipedia 2026 in video games / VGC — 5–8 Jun 2026
Historical TGA / Gamescom / TGS / SGF 2022–2025	English Wikipedia year pages (YYYY in video games) and event articles

7. Source precedence

When two rows describe the same event or title, Floor Brief keeps the stronger source. Confirmed / known-cycle and historical_registry ranks sit at the top; horizon planning templates sit at the bottom.

- Official pinned dates (src/official_dates.py) always overwrite after merge.
- Rank (high → low): confirmed/known cycle and historical_registry → announced_registry → ODS seed → Wikipedia scrape → Wikidata → horizon_template.
- Wikipedia year-page dates replace horizon templates for that edition when the parse succeeds.
- Date precision is stored as day, month, quarter, or year (src/dates.py). A “September 2026” announcement is shown as September 2026, not a 31 Dec stub.
- Daily src/audit_changes.py flags delays, advances, cancellations, and unconfirmed→confirmed flips into data/processed/daily/{date}/changes.json.

8. Key URLs used at runtime

Purpose	URL
Wikipedia API	https://en.wikipedia.org/w/api.php
Wikipedia REST summary	https://en.wikipedia.org/api/rest_v1/page/summary/
Wikipedia year page pattern	https://en.wikipedia.org/wiki/{year}_in_video_games
Wikipedia release-list pattern	https://en.wikipedia.org/wiki/List_of_video_games_released_in_{year}
Wikidata Query Service	https://query.wikidata.org/sparql
Google Trends RSS	https://trends.google.com/trending/rss?geo=XX
Wikimedia pageviews	https://wikimedia.org/api/rest_v1/metrics/pageviews/per-article/en.wikipedia/...
Chart.js CDN	https://cdn.jsdelivr.net/npm/chart.js@4.4.1/dist/chart.umd.min.js
Google Fonts	https://fonts.googleapis.com/css2?family=IBM+Plex+Sans&family=Syne
The Game Awards	https://thegameawards.com
Gamescom	https://www.gamescom.global
Tokyo Game Show	https://tgs.cesa.or.jp
GTA VI	https://www.rockstargames.com/VI

9. Build identifiers for this version

Artifact	Location / identifier
Website entry	python -m apps → FastAPI + Uvicorn on port 8765
Desktop entry	python -m apps.desktop or FloorBrief.app
macOS bundle id	com.ragprediction.floorbrief
PyInstaller spec	packaging/floorbrief.spec
Mac build script	bash scripts/build_desktop.sh
GitHub Actions	macOS-only desktop workflow (.github/workflows/desktop-builds.yml)
Live meta	data/processed/live/meta.json last_checked 2026-08-19
Daily brief	data/processed/daily/2026-08-19/
GMV dashboard cache	data/processed/order_dashboard.json

To refresh live Wikipedia/Wikidata/art/RAG: `python -m src.database` or `python -m src.daily_brief --refresh`. The website must be restarted after Python store changes (`get_store` is `lru_cached`). Static JS/CSS are served from disk and pick up on a hard refresh.

10. Notes for readers

- This document describes the 19 August 2026 website and macOS builds. It is not a software license and does not grant redistribution rights to third-party data.
- Catalog and orders files are internal storefront extracts. Wikipedia, Wikidata, Wikimedia pageviews, and Google Trends RSS remain owned by their operators and subject to their terms.
- Pinned dates can still move; the daily audit is the change log. Do not treat a horizon template as a confirmed organizer date unless the confirmation badge says confirmed.
- Observed best-week GMV on the dashboard is not full-year GMV.
- Contact path for this project is the local Floor Brief desk in this repository.
